

THE CLEARDATA AI PARTNER PROFILE

Great Outcomes Are *Built Together.*

Why *Readiness* Matters

The hard part of enterprise AI is rarely the model. It is the thousand human and organizational details around it — who sponsors the work, whether the data can be reached, whether teams will actually change how they work. ClearData AI brings the platform, the engineering, and the orchestration. The outcomes **compound** when you bring a few things too.

This is not a checklist of prerequisites or a barrier to entry — **we meet you where you are**. It is an honest, friendly map of what makes a partnership move fast and pay off. The more of it you bring on day one, the sooner you see value, the wider it spreads, and the longer it lasts.

And it works both ways. Just as you will judge us on fit, we look for partners who share how we work and what we value — because the engagements that thrive are the ones where **both sides are right for each other**. This document says plainly what we bring, what we need from you, and where we are — and aren't — the right fit.

THE PARTNERSHIP EQUATION

Realized Value = What We Build × What You Bring

Our platform and engineering set the ceiling on what is possible. Your leadership, data, and culture decide how much of it you actually capture — and how fast you get there.

Strong platform × Ready partner = transformation that sticks

WHAT READINESS UNLOCKS

Speed

FASTER TIME TO FIRST
VALUE

Adoption

TEAMS THAT ACTUALLY
USE IT

ROI

VALUE YOU CAN
MEASURE AND GROW

Low Friction

LESS EFFORT TO GET
AND STAY LIVE

None of this requires perfection on day one — only the willingness to build together. The pages that follow map what a great partner brings, the values we share, how we meet you where you are, and where we are the right fit.

What We Bring. *What You Bring.*

A great deployment is a contract between two halves. Here is ours — the capability we put on the table — and here is the part only you can supply. Neither half delivers the outcome alone.

What ClearData AI Brings

The capability and the delivery

- ✓ **The platform.** Multi-agent orchestration, retrieval, and tooling — governed and enterprise-ready.
- ✓ **The engineering.** Context and harness engineering that turns raw models into reliable, cost-efficient systems.
- ✓ **Integration & delivery.** We connect to your systems and data and drive a managed path to go-live.
- ✓ **Governance built in.** Security, data privacy, and human-in-the-loop oversight as first-class concerns.
- ✓ **A living, fast-moving platform.** We develop at startup speed and improve the product continuously by design — better capability every month, never a frozen snapshot.
- ✓ **The measurement.** Telemetry that evidences value in your own numbers.

What You Bring

The conditions for it to land

- **Leadership behind it.** A senior sponsor who makes AI a real priority and clears the path.
- **Access.** To the data, systems, and people the work depends on.
- **An open, AI-first culture.** Teams willing to rethink how the work is done and treat AI as leverage, not threat.
- **A build-and-learn pace.** Comfort with a fast-moving, continuously improving product — and feedback that shapes it.
- **A will to measure.** Agreement on the outcomes that matter, and a baseline to beat.
- **Low friction.** Procurement, security, and legal that engage early and constructively.

Neither half works alone. The best results — and the fastest — come when both sides show up fully.

The *Readiness Profile*

Across every successful engagement, the same traits show up on the client's side. None requires perfection — but the more of this is true, the faster value arrives and the further it spreads.

WHAT GREAT PARTNERS BRING	WHAT IT LOOKS LIKE — AND WHY IT MATTERS
Top-down leadership	✓ A named executive sponsor who treats AI and process improvement as a real priority — setting direction, making decisions, and removing organizational blockers. Mandate from the top is the single biggest predictor of speed and adoption.
Data & process maturity	✓ Reasonable access to the data and systems that matter, and core processes you can at least describe. You don't need pristine data or perfect documentation — you need access and honesty about today's state, so we can map and improve from reality.
Culture of innovation	✓ Teams that are curious, open to new ways of working, and tolerant of iteration. When people see AI as leverage that makes them superhuman — not a threat — adoption follows and expansion takes care of itself.
Comfort with speed & iteration	✓ We ship and improve fast; the product evolves week over week, by design. Partners who embrace a build-and-learn pace — engaging with a living platform rather than waiting for a finished one — capture value sooner and help shape what gets built next.
Access to people & expertise	✓ Time with the subject-matter experts who actually do the work, and a designated point of contact who can answer questions and keep things moving. Great automation is built from how the work really happens — not how the org chart says it does.
Feedback & low friction	✓ Responsive feedback, timely decisions, and a procurement, security, and legal posture that engages early and constructively. Momentum is fragile; the partners who move fastest are the ones who keep the loop short.
Outcome & measurement	✓ Clarity on the outcomes you want and a willingness to baseline today's cost and cycle time. Agree up front on what success looks like, and we can prove it later in your own telemetry — then grow from there.

Governance is part of readiness, not an obstacle to it — partners who bring security and compliance to the table early are the ones who deploy soonest.

Built on *Shared Values*

These are the five things we won't compromise on — the values that shape who we hire, what we build, and how we ship. The best partnerships share them. Here is what each one means for working together.

OUR VALUE	WHAT IT MEANS FOR OUR PARTNERSHIP
Ecological AI	✓ We engineer for more through less — efficiency and a quality floor, not output billed by the token. Great partners value real outcomes and a smaller footprint over raw volume, and judge the work by what it actually achieves.
Diversity of opinion	✓ The best systems are stress-tested by people who disagree well. We want partners who argue in good faith, bring their experts to the table, and let the strongest idea win — not the loudest voice.
AI-first thinking	✓ We reach for intelligence first, then design the human judgment around it — rethinking the work itself, not bolting AI onto yesterday's process. Partners willing to redesign a workflow, not just digitize it, get the most.
Entrepreneurship	✓ We move like owners: bias to action, ship and learn fast. We look for partners who match that pace — quick decisions, fast feedback, and comfort with a product that improves continuously by design.
Ethics	✓ We build AI that amplifies people and keeps humans in control of the decisions that matter. The right partners want their people made superhuman, not sidelined — with accountability and human-in-the-loop treated as features, not friction.

"The companies that win don't work harder. They think better." When our values and yours line up, the work is faster, the trust is higher, and the results last.

Meet Us *Where You Are*

You do not need a finished AI strategy or a spotless data warehouse to start — almost no one does. Here is the honest floor for each dimension, and what we build toward together. The gap is the work; closing it is the partnership.

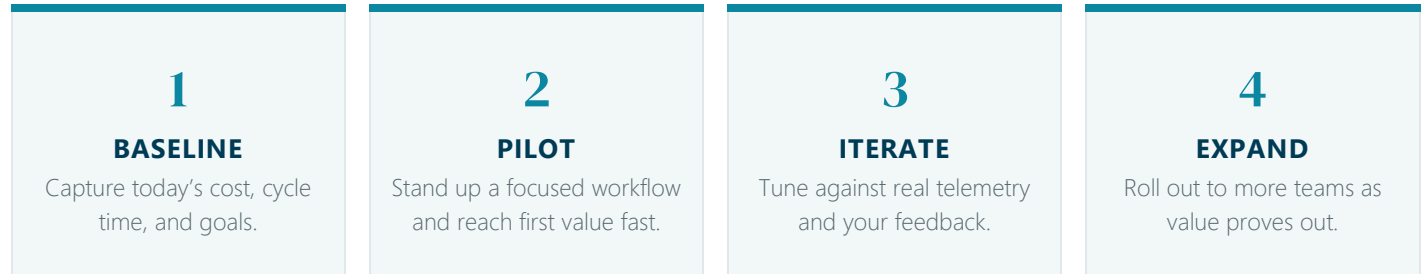

DIMENSION	A FINE PLACE TO START	WHAT WE BUILD TOWARD TOGETHER
Data	Data exists across your systems — even if messy, siloed, or incomplete.	→ Clean, reachable, governed data feeding live workflows.
Process	Key processes live in people’s heads or in rough documents.	→ Mapped, measured processes with AI working in the loop.
Leadership	A curious sponsor willing to back a focused pilot.	→ Active executive ownership of an AI and improvement roadmap.
Culture	A few willing champions on a single team.	→ Cross-team adoption and a standing habit of improvement.
Pace	Used to fixed, once-a-year software releases.	→ Comfortable with a living platform that improves continuously.
Measurement	A rough sense of where time and cost go today.	→ Baselined metrics and ROI tracked per workflow.
Governance	Standard security and compliance expectations.	→ AI governance and human oversight embedded in operations.

We meet you at the left column and help you move right — one workflow at a time. Often the very first engagement is the strategy and discovery work that gets you ready.

How We *Work Together*

Our operating rhythm is built for low friction and fast learning — small, measured steps that compound. Because the platform keeps improving by design, each cycle starts from a stronger place than the last.

Where We're a Great Fit

- ✓ A senior sponsor is genuinely behind it.
- ✓ You'll give us access to the right data and people.
- ✓ Your teams are curious and open to new ways of working.
- ✓ You embrace a fast pace and a continuously improving product.
- ✓ You want measurable outcomes — and will baseline to prove them.
- ✓ You value a fast, low-friction, good-faith relationship.

Where We're Not the Right Fit

- You expect a finished, frozen product with no appetite for iteration.
- AI is meant to quietly cut headcount, not amplify your people.
- There's no executive owner and no willingness to change how work is done.
- Human oversight and accountability are seen as obstacles, not requirements.
- Decisions take months; feedback never comes.

GREAT AI IS *BUILT TOGETHER.*

Bring the leadership, the access, and the will to improve. We bring the platform, the engineering, and the results — and meet you wherever you are today.

Let's pressure-test the fit. A short *readiness conversation* tells us both what's possible.

This partner profile describes the conditions that help enterprise AI engagements succeed, and the values we build on. It is a guide to mutual fit, not a set of contractual prerequisites — ClearData AI tailors every engagement to the client's starting point.
