

FOR THE CHIEF AI OFFICER

## Your AI Mandate, *Operationalized.*

### The CAIO's *Dilemma*

You were handed the most ambitious mandate in the enterprise: make the organization AI-powered — quickly, safely, and with results the board can see. The market answer is to hand your teams a frontier model or a generic copilot and hope it sticks. It rarely does.

ClearData AI takes a different path. We build the intelligence **around your organization** — your data, your workflows, your governance — and we build it **with you**, evolving alongside your agenda. The result is a governed operating layer that turns AI from scattered experiments into production capability you can deploy, control, and prove.

## Why Not Just Use OpenAI, Claude, or Copilot?

OpenAI, Anthropic, and Microsoft build remarkable technology. But a frontier model is an **engine**, and Copilot is a productivity assistant bolted onto Office. None of them is built around *your* enterprise — your data, your processes, your governance, your accountability. That gap is exactly where ClearData AI lives.

	OPENAI · CLAUDE · COPILOT	CLEARDATA AI
<b>Built around your data &amp; workflows</b>	✗ Generic and one-size-fits-all — you adapt to the tool	✓ Engineered from the ground up around your enterprise
<b>Model strategy</b>	✗ Locked to one vendor's models	✓ Model-agnostic — orchestrates OpenAI, Claude, Google & open models; swap anytime
<b>Action across your systems</b>	✗ Chat or autocomplete inside one app	✓ Multi-agent fleets that execute across your full stack
<b>Governance &amp; audit</b>	✗ Largely your problem to bolt on	✓ Human-in-the-loop, full audit trail & guardrails — native
<b>Proof of value</b>	✗ Counts seats, tokens, activity	✓ Outcome attribution tied to real business results
<b>How you get there</b>	✗ A self-serve product you configure alone	✓ A partner who designs, builds & evolves it with you

We don't replace the frontier labs — we *orchestrate* them, and build everything they leave out around your business.

## Built Around You. *Delivered With You.*

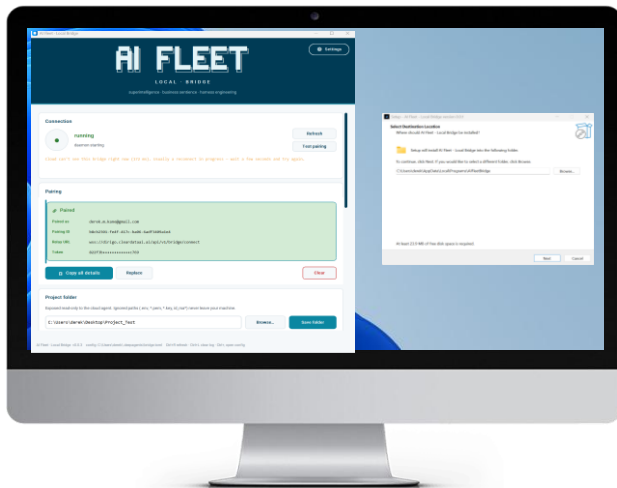

Generic AI makes you conform to it. We do the opposite — and we don't hand you a black box and walk away.

### Personalized to Your Enterprise

- ✓ **Engineered, not assembled.** Every deployment is built from the ground up around your data, systems, and domain — never a template.
- ✓ **Speaks your language.** Tuned to your terminology, your documents, and the way your teams actually work.
- ✓ **Fits your risk posture.** Governance, guardrails, and oversight configured to your industry and your standards.
- ✓ **Evolves as you do.** As your priorities shift, the platform adapts — no rebuild, no rip-and-replace.

### A Partner, Not a Portal

- ✓ **We build it with you.** Collaborative design and delivery — our engineers work hand in hand with your team, not at arm's length.
- ✓ **We bridge your agenda.** We meet you where you are today and advance the platform quarter over quarter, as your mandate matures.
- ✓ **Embedded, white-glove delivery.** Hands-on enablement and support — you're never left to self-serve a system you don't fully control.
- ✓ **Your win is the engagement.** We don't stop at a demo. We stay until it is working — and proving value — in the real world.

## How We Approach It: *Modular By Design*

No monolith, no black box. A composable architecture you grow into — and never have to rebuild.

### Composable Capabilities

- ✓ Memory, skills, planning, voice, autonomy & governance are modular layers
- ✓ Turn on only what a use case needs
- ✓ Compose more capability over time — start small, scale deliberately
- ✓ Each agent fleet is purpose-built, not one-size-fits-all

### Configuration, Not Code

- ✓ Agent behavior is driven by configuration, not hard-coded logic
- ✓ Change behavior and the platform adopts it immediately
- ✓ Zero redeployment — no dev cycle, no downtime
- ✓ Version and audit every change

### Model-Agnostic Core

- ✓ A clean engine layer beneath the platform
- ✓ Route the best model — frontier or open — per task
- ✓ Swap models as the frontier moves; the rest stays put
- ✓ No vendor lock-in, no re-platforming

**Also built in:** grounded retrieval over your data · human-in-the-loop approvals · full audit trail · hard time + token budgets · orchestrated multi-agent fleets · on-prem / private inference

**YOUR MANDATE IS OUTCOMES. *SO IS OURS.***

The frontier labs give your teams an engine. ClearData AI gives you the governed, personalized operating layer around it — built with you, and ready for the board.

**Bring us the mandate you're accountable for. We'll build the operating layer *with you.***
