

The AI *Operating Layer* for Enterprise

Let's Be *Direct*

Every AI vendor in the market is making the same promise. Most are delivering the same thing: template-driven, one-size-fits-all tools that produce impressive demos and disappoint in production. Chatbots that hallucinate. Agents that run without context. Workflows that break the moment your data doesn't look exactly like someone else's.

ClearData AI is the platform that actually works. Not because we have a better chatbot — because we build the intelligence around your organization: your contracts, your databases, your processes, your people. We don't stop until it's working in the real world, not just the demo room.

Why Everyone Else Fails

- ✗ **Built for the demo, not the deployment.** Generic platforms assemble agents from templates. They look powerful on a slide. They fail when they meet your actual data.
- ✗ **They lock you in.** Most platforms bet on a single AI model vendor. When better technology arrives — and it will — you're stuck rebuilding.
- ✗ **Can't adapt without your IT team.** Every behavior change requires a developer, a deployment cycle, and weeks of coordination.
- ✗ **They measure activity, not value.** They count queries and tokens. They cannot tell you what any of it was worth.
- ✗ **They ignore governance.** Agents with no guardrails, no oversight, no audit trail. In regulated industries, that isn't AI. It's liability.

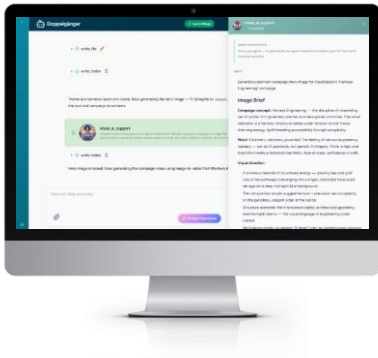

How ClearData AI Works

- ✓ **Built around you, not a template.** Every deployment is engineered from the ground up around your specific data, workflows, and domain.
- ✓ **Model-agnostic by design.** Works with any leading AI model — mix models per agent. No lock-in. No single point of failure.
- ✓ **Adapts in real time.** Agent behavior is controlled by configuration, not code. Change the configuration; the platform picks it up immediately. Zero redeployment.
- ✓ **Measures what the AI produces.** Every agent action is tied to a measurable business outcome. ROI becomes a fact, not a projection.
- ✓ **Governance is structural.** Human-in-the-loop oversight, full audit trails, accountability at every step — for industries where AI decisions have real consequences.

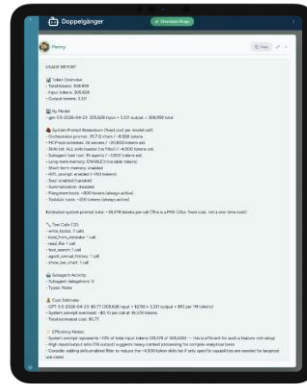

A Complete Enterprise AI *Operating System*

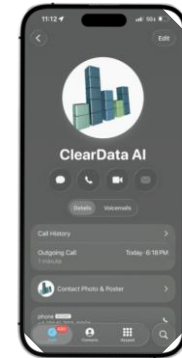

One platform across every surface your teams already use.

WEB & DESKTOP WORKSPACE

TABLET

MOBILE

Connects to Your World

- ✓ Databases and data warehouses
- ✓ Contracts and legal documents
- ✓ HR records and people systems
- ✓ Email, calendar, and communication
- ✓ Financial systems and reporting
- ✓ Any enterprise data source you have

Deploys Agent Intelligence

- ✓ Coordinated multi-agent fleets
- ✓ Specialized agents per domain
- ✓ Voice agents — inbound & outbound
- ✓ Autonomous scheduled operations
- ✓ Complex workflow execution end-to-end
- ✓ Continuous learning — smarter every week

Gives You Control

- ✓ Zero-redeployment configuration
- ✓ Multi-fleet account management
- ✓ Full audit trail on every decision
- ✓ Human oversight at every step
- ✓ Attributable, measurable ROI
- ✓ Adapts as your business evolves

Who We Serve

Built for organizations where AI has to do real work — companies with complex operations, fragmented data, regulated workflows, and teams that need measured business outcomes.

- ✓ **Operationally Complex Businesses.** Manufacturing, logistics, field service, supply chains, maintenance, quality, and multi-site coordination.
- ✓ **Data-Rich Organizations.** Companies with valuable information trapped across documents, databases, SaaS tools, spreadsheets, and legacy systems.
- ✓ **Governed & Regulated Teams.** Healthcare, finance, energy, legal, compliance, audit, risk, and other environments where oversight matters.
- ✓ **Mid-Market & Enterprise Operators.** Leaders who need practical AI for sales, finance, HR, contracts, reporting, customer intelligence, and executive decision-making.

If your business needs AI that can connect to real data, explain its work, stay under control, and prove value — ClearData AI is your platform..

The Investment Case

- ✓ **Production-grade and in active deployment.** Not a concept, not a beta — a working enterprise AI operating system serving real clients.
- ✓ **A platform bet, not a model bet.** Model-agnostic architecture means when the AI landscape shifts, ClearData AI shifts with it. Clients never replatform.
- ✓ **Adopted deeper and faster.** Zero-redeployment configuration lets the platform grow with the organization, without friction.
- ✓ **Full-spectrum in one layer.** Text, voice, autonomous operations, multi-fleet management — displacing multiple point solutions.
- ✓ **Built for the regulated mainstream.** Governance, auditability, and attribution are non-negotiable here. This is not a niche.
- ✓ **A compounding data advantage.** The longer ClearData AI runs, the smarter it gets — and the harder it is to replace.

THE REST PROMISE AI. *WE DELIVER IT.*

Enterprises don't adopt ClearData AI and then adapt to it. The AI adapts to them — completely, continuously, and without rebuilding.

Bring us a real problem. We'll show you the operating layer
working against it.
